“Body” (term use), 25–26
Boston University, 64
Bourdieu, Pierre, 7, 16, 181, 195
Brodkin, Evelyn, 27
Broker model of case management, 66–67, 227–228n1
Buspar, 154 (table)

Carless mentally ill, 89, 97–107; contrast to homelessness, 99–100; and naturally occurring vs. segregated resources, 99–100; see also Landscape for case management; Mobility; Transportation

Cars: car-specific interactions between social workers and consumers, 97–98, 105; money and, 136; as private spaces, 89; see also Mobility; Transportation

Caseloads, 11–12

Case management: assertive case management (ACT, PACT models), 65–66; best practices, 1, 73; broker model, 66–67, 227–228n1; clinical skills and, 207–9, 233n1; “clinical” vs. “case management” terms, 32; constraints on, 67, 102, 106, 109–10, 183–85, 188–90; deficit models, 64–65, 74, 135; functions of, 15, 32–34, 73–74; helper habitus and situated knowledge, 180–201; homeless mentally ill and, 27; levels of service, 55, 230n5; life domains supported (meds, money, manners), 15, 49, 50 (table), 51; monitoring mobility as the core of community support services, 48–56; moral economy of, 126, 128–49; NIMH reform proposals and, 32–34; psychiatric rehabilitation model, 64–65; recovery model, 230n5; rehabilitation model, 228n1; relationship between linking, monitoring, and driving, 102–7; requirements of successful case management, 12, 73; routinization of, 55–56; structuring community time, 48–49; time management needed for, 183–85, 188–90; transition from group-based to individual services, 45–48; transition from situated case management into disciplinary knowledge, 52–56; trial and error in, 194–95 (see also Medications); see also Landscape for case management; Monitoring; Research; Strengths case management

Case managers, 2, 5, 9 (table); demographics of, 197 (table), 198; division of labor, 53, 93, 160–67; education and training of, 13, 43, 73–82, 198–99; emergence of “learning by doing” practice, 13, 42–45; medications and, 160–67; need for reflective case managers to balance disciplinary and situated knowledge, 208, 211; recommended caseloads, 11; as representative payees, 129–37; rise of, 42–60; salaries, 11, 196; self-perception of, 198–201; socioeconomic status of, 196–98; as “specific” and “universal” intellectuals
(Foucault’s concept), 5, 6; statistics on staff activity, 47(table); theoretical and methodological considerations in study of, 2–7; “unspecified worker behavior,” 207; see also Disciplinary knowledge/power; Landscape for case management; Narratives, oral; Narratives, written; Relations between helper and service recipient; Situated knowledge/power; Transportation
Catchment area, 85, 102, 107; defined, 38–39
Categorical institutions (orphanages, homes for unwed mothers, homes for the aged, etc.), 17, 19, 20, 85, 125
Child abuse, national agenda setting and, 20
Choice: clients’ desire for help and services valorized by term “consumer,” 59, 70; natural consequences and, 191–93; strengths case management and, 79, 120–21
Chronic nature of illness, 33–34; “doing for/doing with” expression and, 121; funding and, 56; lack of language in strengths management, 118
Classification, 24; helper-service recipient relationship framed by categorical labels, 25; NIMH reform proposals and, 31; rights and privileges determined by categories, 25–28; as step in diagnosis process, 18
Client, as name for service recipient, 56–60; see also Consumers (former hospital patients)
Clinical skills, 207–9, 233n1
Clipboards, 78, 84
Clorazil, 172
Cloward, Richard, 2
Clozaril, 154(table), 155, 172
Coercion, mental hospitals and, 8–9
Cogentin, 153, 154(table), 155, 162, 175
Community Mental Health Center Act (1963), 31, 32
Community Support Program Implementation Group, 31
Community support services, 17–41, 209–214; defined/described, 26; disciplinary knowledge/power and, 42; elements of mental hospitals and community support services compared, 9(table), 24; historical roots, 12, 17–34; “in vivo” methods defined, 33–34; jurisdiction and, 19, 42; life domains supported (meds, money, manners), 15, 49, 50(table), 51; monitoring mobility as the core of community support services, 48–56; naming of service recipient as “client” or “consumer” and, 56–60; NIMH Community Support Systems Strategy Development and Implementation program and, 34; NIMH findings on funding and need for leadership, 30–31; NIMH reform proposals and, 31–34; obstacles to establishment of, 40; politics of categories focused on “illness identities,” 24–26; politics of location, 24, 26–28; review of studies on deinstitutionalization, 20–24; rise of the case manager, 42–60; services and functions listed, 32–34; as social field replacing mental hospitals, 7–8, 12, 19–28, 37, 40, 56–60; spatial enclosure of social relationships of helping and, 87; see also Continuum of
Community support services, (Cont.) care; Funding; Landscape for case management; Normalization, principle of; Outcomes; Transportation

Community Support Services (High County): background information, 10–12; catchment area, 38–39; consumer drop-in center, 90–91; continuum of care and, 54–55; de facto living spaces in CSS buildings, 89–91; division of labor, 53, 93, 160–67; early years, 43–45; freedom of consumers to negotiate space at, 94–96; funding of, 12, 35–38, 44, 52; levels of service, 55; location and spatial arrangement of offices, 87–93; med room, 160–67; move to Andover, 88–89; move to Harrisville, 90; naming of service recipient as “client” or “consumer” and, 56–60; origins of, 34–41; perspective from inside the office looking out, 86–97; PHP sector, 53–54; residential sector, 53–55; space allocation in contrast to hospitals, 90, 92–93; structure of, 11, 93–94; transition from group-based to individual services, 45–48; transition from situated case management into disciplinary knowledge, 52–56; vocational sector, 53–55; see also Landscape for case management

Community Support Systems Strategy Development and Implementation program, 34–36

Community time, 21, 48–49

Conferences, 29–31

Coniglio, G. C., 36

Consumer drop-in center, 90–91

Consumers (former hospital patients), 9(table); “body” as term, 25–26; car-less mentally ill, 89, 97–107; empowerment theories and, 211; failure to connect drug compliance with improvement, 172, 178–79; illnesses acknowledged by, 25; “illness identities” and perception of worthiness for aid, 24–26, 28; life domains supported (meds, money, manners), 49–51, 50(table); naming of (“client” and “consumer”), 40, 56–60, 70–72; need for employment, 28, 40; need for housing, 28, 39–40; need for money, 24, 26 (see also Employment; Money); oral narratives and language about need, dependency, and illness, 109–10; practical categories “low/high need,” “low/high functioning” (see “Low/high need,” “low/high functioning” expression); progression to a normative state, 51, 54; services for chronically mentally ill subordinated to the “worried well,” 11, 12, 32; statistics on client activity, 46–47 (tables); structuring community time through surrogate life activities, 48–49; target population defined, 38; transition from group-based to individual services, 45–48; variable movement within a life domain, 49–51; written texts and the production of goal-oriented, self-directed subjects, 116–17; see also “In vivo” methods; Choice; Daily living skills; Desires of consumers; Medications; Mobility; Money; Relations between helper and service
recipient; Target symptoms; Transportation
Continuity of staff, 12
Continuum of care, 37–38, 49, 221 (figure); mobility and, 38; monitoring changes in life domains and, 54–55
Corgard, 154 (table)
Criminality: “illness identities” in contrast to, 24; spending sprees and, 137
Crises: medications and, 162; money and, 133–36, 141–42, 145; office spaces and, 94–95
Critical-realist perspective, 215–220
Cyclical nature of mental illness, 26, 124, 168
Cylert, 154 (table)

Daily living skills, 33–34; medications and, 160–67; partial hospital programs and, 44; statistics on time spent on, 47 (table), 49; see also “In vivo” methods; Manners
Decarceration, 22–23
Deficit models of case management, 64–65, 74, 135
Deinstitutionalization, 1, 20–28; advocates vs. critics of, 10–11; benefits of personal vs. institutional time, 9; community support services as a new social field and, 19, 20–28; consumer advocacy and, 57; cyclical nature of mental illness and, 26; early projects, 17; economics of, 22–24, 229n5; effects on space allocation, 92–95; needs of former patients, 28 (see also Employment; Housing; Medications; Money; Transportation); NIMH-CSP con-
ferences on early policies, 29–31; overmedication and, 160; politics of location, 24, 26–28; review of studies on, 20–24; rise of categorical institutions, 17, 19; temporary living situations and, 213–214; see also Transportation
Delusions, 152 (table), 153, 178–79
Demographics, 100, 101 (table), 102
Depakene, 154 (table)
Depakote, 154 (table), 155
Dependency, 117; cultural significance of, 194–95; “doing for” and, 181–82, 213; money and, 132–37, 145–46; natural consequences and, 192–93; see also “Doing for/doing with” expression
Desires of consumers: emphasized in strengths case management, 65, 68–75; hidden motivations off-limits in strengths case management, 135, 168–69, 208; money as incentive, 143–44; symbolic component of, 139–40, 148–49; wants distinguished from needs, 74, 80–81, 121–22, 200–1; weighing desires and needs, 139–41; see also Goal planning
Desyrel, 154 (table)
Diagnosis, see Assessment and diagnosis
Dincin, Jerry, 30
“Disability,” rights and privileges determined by, 25–26, 28
The Disabled State (Stone), 25
Disciplinary gaze, 6–7, 90–91
Disciplinary knowledge/power, 6, 42, 219 (figure); defined/described, 2, 4–5; disciplinary language, 219
Disciplinary knowledge/power, (Cont.) (see also Goal planning); domestic violence shelters and, 85; economics of deinstitutionalization and, 22; examples of, 21; medications and, 175–76, 179; mental hospital compared to community support services, 9(table); monitoring and, 24; relations to situated knowledge, 6, 14–15, 123–24, 175, 179, 206–7, 209–214; routinization of case management and, 55–56; self-directed behavior and, 67–68, 122–23; suppression of language of illness, 117–18, 122–23; time management and, 190–91; transition from situated case management into disciplinary knowledge, 52–56, 63; written texts as copies of, 116; written texts as empirical site of, 7, 109; see also Strengths case management

Dispositions, teacher/student and parent/child, 16, 198–200

“Do him” expression: examples of use, 118–22; language of needs and, 121; meanings defined/described, 122, 137; recognition of chronic nature of illness and, 121

“Doing for/doing with” expression, 149; consumer’s “investment” in CSS and, 144, 147; dependency and, 181–82; examples of use, 118–21, 145; medications and, 169; money and, 133–36, 144, 145; recognition of chronic nature of illness and, 121; recovery of language of self and, 213; relation to “gets it,” 122, 193; relation to natural consequences, 192, 194; self-monitoring capability and, 122, 205; situated knowledge/power and, 121–22, 181–85, 205–6; teacher/student or parent/child dispositions and, 199–200; time management and, 183–85

Domestic violence shelters, 85

Double funding of hospitals and community support services, 22, 23

Drug dealers, 2–3

Drugs, see Substance abuse

Economics, 21; double funding of hospitals and community support services, 22, 23; economics of deinstitutionalization, 22–24, 229n5; mental hospital compared to community support services, 9(table); need for former patients to have money, 24, 26, 28 (see also Employment; Money)

Education and training of social workers, 13, 43, 73–82, 198–99

Effect interpretation, 15, 151, 157, 165–76, 204

Effexor, 154(table)

Elavil, 154(table)

Eli Lilly and Company, 153

Employment, 33, 50(table); baseline behavior, 51; de facto living spaces in CSS buildings and, 91; discretionary money and, 145–47; former patients’ need for, 28, 40; monitoring and, 49, 50(table), 104; moral economy of case management and, 145–47; strengths case management and, 103; see also Vocational and prevocational training

Empowerment theory, 211

Engagement ring crisis, 133–36

Eskalith, 154(table), 155
INDEX 255

Estroff, Sue, 24

Foucault, Michel, 3–6, 206; biopower concept, 3, 27–28; on coercion, 8–9; “consumer” as term and, 57; pervasive power vs. power-over, 127; pessimism about progress in liberal social projects, 24; “specific” intellectuals concept, 5, 6

Fountain House, 21, 30, 229n3

Fragmentation of mental health services, 10, 12; Marmor and Gill’s fragmented polity thesis, 22, 24; NIMH findings on, 30

“Friendly visitor,” 16, 180

Funding: continuum of care and, 40; CSS (High County) funding, 11, 12, 44, 52; double funding of hospitals and community support services, 22, 23; economics of deinstitutionalization, 22–24, 229n3; naming of service recipient’s illness as “chronic” or “long-term” and, 56; NIMH findings on shift from state to federal funding, 30–31

Gaze, disciplinary, 6–7, 90–91

Geopolitical space, 85, 100–2, 107

“Gets it” expression: examples of use, 118, 120, 147; lack of explanations for not “getting it,” 212; meanings defined/described, 110, 193–95; medications and, 172–73; money and, 133, 147; natural consequences and, 122–23, 193–95; possible alternate disciplinary schemes for consumers who don’t “get it,” 213–214; recognition of illness and, 122; site for self-monitoring and, 205; strengths case management and, 194

“Getting underneath,” 75–77

Gill, Karyn, 22

Girl, Interrupted (Kaysen), 7

Goal planning: consumer’s ability to understand goals, steps, and actions (see “Gets it” expression); defined/described, 75–81; failure to achieve goals, 116–18, 121–22, 204; “getting underneath” and, 175–77; medications and, 121–22, 164, 169, 178; money and, 132–37, 139–40, 143–46; relationships and, 200; Robert and (case study), 112–14, 113(table), 116–17, 121–22; suppression of language of needs and, 80–81, 110

Gordon, Linda, 125, 148

Graebner, William, 20

Gramsci, Antonio, 5

Gregory, Dick, 80, 81

Habitus, defined, 16; see also Helper habitus

Haldol, 154(table), 155, 165, 174

Hallucinations, 152(table), 153

Handler, Joel, 2

Hannah, Jerry, 35–40, 54

Harris, Maxine, 207

Harrisville, KS, 90, 101(table)

Helper habitus, 15–16, 180–201; defined, 195–96; “doing for/doing with” and, 181–85; “low/high need,” “low/high functioning” and, 185–91; “natural consequences” and, 191–93; socioeconomic status of case managers and, 196–98; teacher/student and parent/child dispositions, 16, 191
Helping relationships, see Relations between helper and service recipient
High County, KS: demographics of, 102; lack of affordable housing, 99, 102; naturally occurring resources in, 100; see also Landscape for case management
High County Mental Health Center, 10–12; see also Community Support Services (High County)
A History of Retirement (Graebner), 20
Homelessness, 10, 27, 99; contrast to carlessness, 99–100; discretionary money used to prevent, 142; relation between wants and needs, 81
Home visits, 4, 96, 103–6, 206; see also Narratives, oral
Hopper, Edward, 92
Hospitals, see State mental hospitals
Hostility, 152(table), 153
Housing, 28, 33, 101–2; broker model and, 66; changing client needs, 50(table), 50–51; CSS’s move to Andover and, 88–89; early programs in Kansas, 39–40; home visits, 4, 96, 103–6, 206; lack of affordable housing in High County, 99, 102; money and, 141–43; residential sector of CSS, 53–55; Section 8 vouchers, 102, 104; see also Living situation
Hygiene, 98, 147, 172, 173
ICF-MH, see Intermediate Care Facility for Mental Health (ICF-MH)
“Illness identities,” and perception of worthiness for aid, 24–26, 28
Income levels in High County, 101(table), 102
Inderal, 154(table)
Inference/reasoning, as a modality of social work, 18–19, 24
Insomnia, 152(table), 153
Intellectuals, specific and organic, 5, 6
Interdependency, 69
Intermediate Care Facility for Mental Health (ICF-MH), 53–54
Interviews, 217, 223–225
“In vivo” methods, 33–34, 47, 49, 77, 116
Involuntary commitment, 11, 78
Irritability, 152(table), 153
Jackson, John Brinckerhoff, 106–7
Jurisdiction, 19, 42
Kansas: community support services and, 34–41; deinstitutionalization in, 10–11; demographics of High County, 102; economics of deinstitutionalization in, 23; Living, Inc. program, 39; mandated strengths case management, 67, 109–10, 210; Partnership Agreement for Continuity of Treatment, 39
Kansas Case Management Act (1988), 62
Kansas Mental Health Reform Act (1990), 8, 11, 27, 62
Kanter, Joel, 207–8
Kaysen, Susanna, 7
Klonopin, 154(table), 155
Knievel, Evel, 80–81
Lamb, Richard, 30
Landscape for case management, 83–107; boundaries and, 106–7; carless mentally ill, 89, 97–107; car-specific interactions between social workers and consumers, 97–98, 105;
convenience and, 106; crises and office spaces, 94–95; de facto living spaces in CSS buildings, 89–91; defined/described, 83–86; driving time, 97–98, 100, 106; fluid boundary between social workers’ and recipients’ space, 96; income levels in High County and, (table), 102; need to adapt low incomes to high-income landscape, 102; perspective from inside the office looking out, 86–97; perspective from outside looking in, 97–107; privacy (see Privacy); relationship between linking, monitoring, and driving, 102–7; see also Constraints on case management; Home visits

Language: “body” as term, 25–26; choice and, 70; classification as syntax of political rhetoric, 20; “clinical” vs. “case management” terms, 32; helper-service recipient relationship framed by categorical labels, 25; hospitalization framed as the critical problem, 27; “illness identities” and perception of worthiness for aid, 24–26, 28; labeling illnesses, 71–72; language about need, dependency, and illness, 109–110, 118–24; language of wants vs. language of needs, 74–75, 127–28, 135; money and, 127–28; naming of service recipient, 56–60, 70–72, 127; NIMH reform proposals and, 31; “A Person and a Patient” (poem), 71; “rehabilitation” as term, 65; rights and privileges determined by categories, 25–26; situated language (see “Do him” expression; “Doing for/doing with” expression; “Gets it” expression; “Low/high need,” “low/high functioning” expression; Natural consequences; Situated language); suppression of language of illness and need, 117–18, 122–23; suppression of language of self, 202–6; voluntary participation and “consumer” as term, 59; written texts and the production of goal-oriented, self-directed subjects, 116–17; see also Narratives, oral; Narratives, written

Learning by doing, 42–45

Least restrictive environment, 33, 36, 49, 51

Lerman, Paul, 23

Life domains (meds, money, manners), 49–51, 50(table); progression to a normative state, 51, 54; in strengths case management, 74–75; variable movement within, 49–51, 54; see also Manners; Medications; Money

Limitations of strengths case management, 202–9; failure to achieve goals and, 116–18, 121–22, 204; hidden motivations neglected, 135, 168–69, 208; lack of language for consumers who don’t “get it,” 122–23, 194 (see also “Gets it” expression); management confined to surface level of helping relationships, 206, 208; medications and drinking and, 168–69; money and, 132–37, 148–49; suppression of language of self, 202–8; time management considerations neglected, 183–85, 188–90

Linking, 102–7, 125–26

Lipsky, Michael, 213

Lithobid, 153, 154(table), 155, 165
Living situation: baseline behavior, 51; behavioral and motivational clues, 77–78, 103–5, 206; monitoring and, 49–51, 50(table), 96, 104; natural consequences and, 123–24; residential supervisors, 53–54; Robert and (case study), 110–12, 115–16, 118–24, 213; see also Homelessness; Housing
Location, see Space
“Low/high need,” “low/high functioning” expression, 213; examples of use, 118, 121, 169, 173, 175; meanings defined/described, 186–88; medications and, 169–71, 173, 175; as names for self-monitoring capability, 110, 205; situated knowledge/power and, 185–91; strengths case management and, 188–90; time management and, 188–90
Loxitane, 154(table), 155
Lubove, Roy, 195
Lunbeck, Elizabeth, 209
Luvox, 154(table)
Manners: as ability to follow a routinized schedule of daily activities, 55; baseline behavior, 51; complex relationship between money, medication, and manners, 172; discretionary money and, 143–49; as life domain supported by situated practice, 15; limitations of strengths case management and, 204; monitoring of, 49, 50(table); as social support model, 34; see also Daily living skills
Margolin, Leslie, 4
Marmor, Theodore, 22
Maslow, Abraham, 80, 81
Mass transit, 28, 89, 98–99
Med boxes, 162–67
Med drop, 163–67, 169, 232
Medicaid, 44, 52, 67; home visits and, 116
Medications, 15, 34, 150–79, 154–56(tables), 175–76; baseline behavior, 51; categories of, 152(table), 153, 155–60; combinations of, 156–60; complex relationship between money, medication, and manners, 172; compliance monitoring and, 49–51, 50(table), 102–3, 160–67; consumers’ failure to connect drug compliance with improvement, 172, 178–79; crises and, 162; desired effects of, 157–59, 165–79; disciplinary knowledge/power and, 175–76, 179; division of labor, 160–67; effect interpretation, 151, 157, 165–76, 204; frequency of use, 153–56; goal planning and, 121–22, 164, 169, 178; high users, 151, 156–59; injectable, 162, 175–76; levels of service, 55; low users, 151, 156–59; med room, 160–67; number used per consumer, 157; overmedication, 160; perception of effects on the body, 176–79; prescription frequency, 153, 154–56(tables); Robert and (case study), 113–17, 119–21; side effects, 232; situated knowledge/power and, 151, 157, 167–79; transportation and, 99; unpredictable effects of, 151, 153, 155, 157–60, 165, 178
Med room, 160–67
Mellaril, 154(table), 155, 166
“Member,” as term for service recipient, 58–59
Memory and concentration, poor, 152(table), 153, 178–79; case managers as auxiliary memory for consumers, 176, 178–79

Mental health policies: lack of literature on social work practice, 20; Marmor and Gill's fragmented polity thesis, 22, 24; measurements of success focused on reduction of hospital utilization, 27; naming of service recipient as “client” or “consumer” and, 56–60; politics of categories focused on “illness identities,” 24–26; politics of location, 24, 26–28; review of studies on deinstitutionalization, 20–24; Weiss's study, 21; see also Deinstitutionalization

Mental illness: chronic nature of, 33–34, 56, 118, 121; cyclical nature of, 26, 124, 168; labeling and, 71–72; language and (see “Doing for/doing with” expression; “Gets it” expression; “Low/high need,” “low/high functioning” expression; Natural consequences); oral narratives and language about need, dependency, and illness, 109–10, 118–24; suppression of language of illness in written narratives, 117–18; see also Medications; Target symptoms

Mobility, 21; case managers and, 42; continuum of care and, 38; mental hospital compared to community support services, 9(table); monitoring mobility as the core of community support services, 48, 49–56; see also Transportation

Money, 15, 125–49; case managers as representative payees, 129–37; complex relationship between money, medication, and manners, 172; consumer management of, 127, 137–41; consumers’ need for, 127; crises, 133–36, 141–42, 145; debate over separation or integration of social service with cash assistance, 148–49; discretionary, 141–49; engagement ring crisis, 133–36; goal planning and, 132–37, 139–40, 143–46; historical use of money in social work, 148; household maintenance, 55; as incentive for “investment” in CSS, 143–44, 147; language for self-monitoring capability, 204–5; life skills and rehabilitation model, 34; limitations of strengths case management and, 132–37, 148–49; linking and, 125–26; manners and, 143–49; median incomes in High County, 101(table), 102; medications and, 162; mental hospitals as socialized economy, 126–27; monitoring and, 103, 104, 125; moral economy of case management and, 126, 128–49; need to adapt low incomes to high-income landscape, 102; Robert’s finances (case study), 111–12; sex and, 139; spending sprees, 136–37; strengths case management and, 127–49; substance abuse and, 103, 112; symbolic component of desires, 139–40, 148–49; transportation and, 99; weighing desires and needs, 139–41; welfare debates of the 1950s and 1960s, 148

Monitoring, 42, 104; consumer drop-in center and, 90–91; employment and, 104; fluid boundary between social workers’ and recipients’ space, 96;
Monitoring, (Continued)

and Foucault’s pessimism about progress in liberal social projects, 24; intrusiveness of, 105–6, 206; living situation and, 49, 50(table), 51, 96, 104; medications and, 49, 50(table), 51, 102–3, 160–76; money and, 103, 104, 125; monitoring changes in life domains, 51; monitoring mobility as the core of community support services, 48, 49–56; power relations and self-monitoring, 203–4; reading clues during home visits, 77–78, 103–5, 206; relationship between linking, monitoring, and driving, 102–7; site for self-monitoring, 204–5; social skills and, 49, 50(table); strengths case management and, 105–6

Moral economy of case management, 126, 128–49, 204, 205; discretionary money and, 141–49; engagement ring crisis, 133–36; housing and, 145–46; weighing desires and needs, 139–41

Motivations of consumers: hidden motivations off-limits in strengths case management, 135, 168–69; money and, 135; see also Desires of consumers

Narrative, 108–24; empirical site of situated vs. disciplinary knowledge, 109; importance of using both oral and written narratives in research, 108–11, 116–17; work performed by both spoken and written narrative, 109; see also Disciplinary knowledge/power; Situated knowledge/power

Narrative, oral, 6, 15, 109–10; expressions signifying situated knowledge (see “Doing for/doing with” expression; “Gets it” expression; “Low/high need,” “low/high functioning” expression; Natural consequences); language about need, dependency, and illness, 118–24; medications and, 164–66, 168–74, 177–79; money and, 133–34, 143–48; office talk, 119–20; structured interviews, 217, 223–225; team meetings, 118–20, 133–34, 165–66, 168–74, 177–79; unique work performed by, 109

Narrative, written, 15, 109, 113–18; focus on goal-attainment in, 113–17; incomplete nature of, 116–17; as records of disciplinary knowledge only, 209–210; repetitive nature of strengths-based text when confronted by failure to achieve goals, 116–18; suppression of language of illness, 117–18; textual, self-directed consumers, 112–14, 116–17; workshop training, 63–82; written texts as copies of disciplinary knowledge, 116

National Institutes of Mental Health (NIMH), 13; Community Support Systems Strategy Development and Implementation, 34; conferences on early deinstitutionalization policy, 28–31; on CSS and case management, 32–34; proposals for reform of community support services, 31–34; strengths case management and, 64; Weiss’ study on, 21

Natural consequences, 110, 191–95; dependency and, 192–93; examples of use, 118–20; failed goals and, 123;
“gets it” and, 122–23, 193–94; housing and, 123–24; money and, 134–35, 137, 141; situated knowledge and, 118–20, 122–23, 191–95
