Index

accumulated surplus, 359
Acemoglu, Daron, 364, 517–21
Africa: convergence to high performance level, 34; deficiencies in governance, 392; exchange rates, 418; export-led growth strategy and, 27; FDI in, 422; IMF structural adjustment policies stifling growth, 373–74; industrial policies, 399–400; making most of natural resources, 371, 385–87; structural adjustment and deindustrialization, 360–61, 388; Washington Consensus policies effect on, 481–82
agency problems, 409
age structure, society’s, 58
aggregate production function with constant returns to scale, 151–52
Aghion, Philippe, 10, 179, 234, 499; OECD study, 520; on TFP growth, 497–98
Agricultural Extension Service, 5, 93
agricultural sector, 150, 507; distortionary tax on, 277–79; impact of quotas, 346, 346–47; industrial sector and, 332; model farms, 54
AIDS, 445, 447
Alabama, 404–5
alternative technologies, 122
appropriability of returns, 76–77
Arkansas, 404–5
Arrow, Kenneth, 485–87; Arrow-Debreu model, 16–17, 19–20, 52, 102, 142, 161–62, 490, 500; endogenous growth theory, 1–3, 15–16; endogenous learning analysis, 473, 481; on learning and level of investment, 401; on market structure, 104; on Pareto optimality, 1–2, 19–20
Arrow-Debreu model, 16–17, 52, 102, 142, 161–62, 490, 500; assuming away innovation, 19–20
asymmetric Bertrand equilibria and nonexclusivity, 200–202, 201
asymmetric equilibria and advantage of specialization, 328–30, 329
asymptotic behavior, 319
Atkinson, Anthony B., 64
AT&T, 119, 442
Australia, 14
Austria, 30–32, 31
Baily, Klinger, 35
Baltic countries, 30–32, 31; convergence to high performance level, 33–34
Bayh-Dole Act, 54, 433, 439
Bayraktar, Nihal, 403
belief systems and social constructs, 460–63; beliefs versus reality, 62; biased perceptions, 70–71; capitalism and selective framing of evidence, 71; cognitive frames, 61–62, 72–74; The Entrepreneurial State: Debunking Public vs. Private Sector Myths, 445; equilibrium fiction, 71, 73, 75, 471, 481; invisible hand notion, 18–19; mindsets, 9, 48, 57, 61–63, 73, 457–59, 472; persisting beliefs, 465–66
benefit tax, 450
Berners-Lee, Timothy, 136
Bertrand equilibria, 195–96, 234, 236; asymmetric Bertrand equilibria and nonexclusivity, 200–202, 201; Cournot competition compared to, 191–96; distinct features of, 191; marginal return to increased investment in R & D, 208, 208–9, 209; multiple potential entrants: contestability, 198–200, 199; stochastic research and, 207–10, 208, 209; symmetric equilibrium, 198
Bertrand price-competition model, 103, 110–12, 116, 119
best practices: catching up to, 38–39; cross-border knowledge flows, 93; failing to learn, 32; gap between average and, 18, 44, 81–82; gap between productivity and, 29–30, 80; microscopic perspectives, 34; model farms, 54; productivity growth total versus hours paid, 39
biased perceptions, 70–71
BlackBerry, 435
Bloom, Nicholas, 506
BNDES. See Brazilian Development Bank
Boyle, James, 433
BRAC genes, 145
Brazil, 500; development banks, 395; industrial policies and, 390–91; infant aircraft industry, 502–3; sugar-based ethanol development, 388
Brazilian Development Bank (BNDES), 395
Britain: aggressive protection and subsidies, 389; factor endowments in, 24; financial market liberalization example, 403–4; terms of trade, 4. See also United Kingdom
broad tariff protection, 4–5, 500–501
bureaucracy, innovation and, 84–85, 85
Burns, Arthur, 504
Canada, 39
capital: 2008 global financial crisis, 42, 91, 151, 372, 405, 418, 491, 495; access, 401; controls, 405; Frontier moved out by investing in, 40–43, 92; improved allocation of, 42; for R & D, 79, 408
capitalism: aftermath of 2008 crisis, 42, 96, 151, 372, 405, 418, 491, 495; capital flows: failure of standard theory, 407–15; China’s state-directed, 389; crony, and corruption, 375; innovation as heart of, 57, 101; managerial, 478; recessions and depressions, 40; Schumpeter’s optimistic
perspective, 101–2, 169–70; selective framing of evidence, 71; U. S. cutthroat competition, 364–65. See also neoclassical model

carbon tax, 517–21
catalysts for learning: in learning economy, 59–60; mobility as, 78, 92; new knowledge as, 48; new production methods as, 52–53; what we learn from others as, 53–54

catching-up countries: best practices in advanced countries, 44; broad tariff protection, 4–5, 500–501; channels of learning, 455–56; criticisms of infant-industry argument, 489, 511–12; development-oriented IPR, 454; economic circumstances of, 68–70; evergreen patents, 440; financial market liberalization and, 403–4; flow of funds, 411; funds diversion from, 405–6; GDP with industry-level tariff-skill interaction term, 512; industrial niches, 512–16; infant-industry argument and, 333–34, 500–501, 510–11; intellectual property regimes, 59; IPR static inefficiencies within, 431; knowledge gaps between industrialized and, 44–45, 70, 360–61, 372–73, 481; knowledge trade-offs, 78–79; knowledge transmission, 48; learning economy and, 51; McKinsey Global Institute study on, 501–2; social benefits from intervention, 336; Solow on comparative advantage in, 500, 502; steady-state solution, 351–53, 352, 353; trade policies model, 365–66; two economies model, 341–45; two-sector model, 337–44, 338; underpricing of natural resources, 171, 377

chimney sweeps alternative, 446
China: comparative advantage in, 355; dominance in world market, 498; exchange rate policy, 420, 488–89; favoring broad barriers to trade, 396; FDI in, 507; growth after commercial reforms, 33–34; industrial policy, 391, 495; investments in R & D, 455; learning-related trade restrictions, 389–90; outward-bound investment, 423–24; quality of life, 30–32, 31; reserves and surpluses, 362; restricted capital outflow, 407; state subsidies and product market competition, 497–98

Cimoli, Mario, 429
clean innovation subsidy, 517–21
climate change: carbon tax, 517–21; clean innovation subsidy, 517–21; government role, 20, 495, 498; modern science on, 62; World Commission on Environment and Development, 442

closed economy: basic model, 268–70, 269; basic model: consumption, 268–72, 269, 275–79, 287–88; basic model: optimal production and consumption, 289–95; costs of learning, 274; distorting consumption, 277;
closed economy (continued)
distortionary tax on agricultural sector, 277–79; elasticity of demand, 277; elasticity of substitution, 279; infant-economy argument for protection, 265, 476; learning sector subsidy, 282; lower societal innovation, 266; lump sum taxation in, 267, 273–74, 277, 279, 282; market imperfections, 267–68; market structure and innovation, 279–81, 280; monopoly power and wages, 266; optimal industrial subsidy, 276–77; optimal interventions in, 274–79; optimal tax intervention, 274–79; productivity growth, 270–71, 490–91; rate of technological progress, 271; with separable demand, 276; two-period discrete time, 271; two-period utility, 273–74; unfettered markets inefficiency, 272–73; value of research and level of production, 285. See also learning by doing

Coase, Ronald, 28, 474
cognitive frames, 61–62, 72–74
cognitive impediments, 73. See also belief systems and social constructs

Colbertist policy, 509
Columbia University, 500
Commission on Growth and Development, 500, 521
common pool problem, 144–45
common resources problem, 240–46; better regulation, 246; effect of improved investment environment, 243; effect of increased competition, 244; equilibrium fish extraction as function of fishing population, 241; equilibrium fishing stocks, 242; rate of increase in fishing stocks as function of fishing population, 240.

See also natural resources commons, enclosure of, 145–46, 238, 433, 451
communist countries, quality of life, 30–32, 31
Communist Manifesto, 14
comparative advantage: absolute advantage versus, 338; in catching-up countries, 500, 502; changes in, 362–63; China’s, 355; dynamic, 385; Korea’s industrial protection, 338–39, 338–40, 363, 489; in learning economy, 49; redefined theory of, 24–28; static, 385
compensation systems, 123
competition: behavior of monopolist, 312–13; business cycle and, 520–21; China’s state subsidies, 497–98; common resources problem, 244; Cournot, 191–96, 195, 202–6, 204, 212–13, 234, 235–36; creative destruction, 191–95, 198, 207–10, 208, 209, 212–13; cutthroat, 364–65; example of Myriad Genetics, 145; government intervention two-sector model, 316–17; imperfections of, 138–41; innovation efficiency and, 110–13; innovation linked to, 103, 478; intensity and innovation efficiency, 110–13; intervention in monopolistic, 316–17; labor supply elasticity, 314–15, 318; laws and policies, 171; link with innovation, 103, 478; lump sum tax subsidy and, 315–16; market
distortion in monopolistic, 313; monopoly outcome versus competitive outcome, 313–15; multiple rational expectations equilibria, 317–18, 318; myopic versus nonmyopic monopolist, 314; pace of innovation and, 127–29; perfect, compared to monopolistic, 139–40, 140; private rewards and social returns, 143–44; relationship between innovation, consumer welfare, and, 123–24; welfare-enhancing government intervention, 311. See also Schumpeterian competition

competition laws and policies, 171

competitive equilibrium, 269, 269–70; closed economy, 269, 269–70; Smith on, 2
